EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Leonard on 10/29/03.

The application has been amended as follows:

Please cancel the previously submitted abstract and replace with the new abstract as printed on the separate sheet.

Allowable Subject Matter

2. Claims 1 and 3-11 are allowed.

3. The following is an examiner's statement of reasons for allowance: The prior art teaches parts of the method such as mask and energy density (Ichiyama, USPN 4613842) or the crystal mask, homogenizer and lenses (James, 5463200). However, there is no disclosure of a combination of a homogenized beam through a liquid crystal mask at the particular split beam energy density to form the dot. By using these precise parameters dot size, shape and pitch can be controlled. Neither does the prior art teach the microdot as claimed with a concave portion lower than the wafer surface surrounding the protrusion, which is higher than the wafer surface. See O'Dell (USPN

6068891) and Matsumura (USPN 6248973), which teach a higher protrusion but no lower concavity and Kruger (USPN 4847183), which teaches a lower concavity, but no higher protrusion. In the prior art, at least one of these features is at wafer level.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ota et al. (USPN 5477309).
